### DETAILED ACTION

1. This Office Action is in response to the Amendment filed September 14, 2004. Claims 30-31 have been added and claims 1-31 are now pending.

#### *Examiner's Amendment*

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CAR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. William D. Jackson on November 4, 2004.

3. The application has been amended as follows:

**Cancel claims 15-29** without prejudice;

**Claim 1**, line 11, change "said monomer" to --polymerize said monomer--;

**Claim 8**, line 13, change "R'm" to -R'm--;

change "(Cp<sub>b</sub>R'm)" to --(Cp<sub>b</sub>R'm)--;

**Claim 14**, line 2, change "diphenyl methylene" to --diphenylmethylene—  
(see claim 12, line 2);

Claims **30-31**, line 2, change " $M^{2/g}$ " to --m<sup>2</sup>/g-- (see page 10 - [0015]).

#### *Allowable Subject Matter*

4. Claims 1-14 and 30-31 are allowed.

5. The following is an examiner's statement of reasons for allowance:

The present claims are allowable over the closest references: Herrmann et al. (US 5,942,586).

The present invention relates to a process for olefin polymerization, comprising

A	providing a supported metallocene catalyst	a stereospecific metallocene catalyst component supported on a polyamide support [spheroidal and average particle size = 5-60 microns] on which an alkylaluminum co-catalyst component has been supported
B	contacting the catalyst with an olefin containing three or more carbon atom in a polymerization reaction zone	

(summary of claim 1)

Herrmann et al. disclose a process for olefin polymerization in the presence of a catalyst obtained by the contact of isopropylidene (9-fluorenyl)(cyclopentadienyl) zirconium dichloride with methylaluminum in toluene, followed by the contact with a polyamide having particle size less than 200 $\mu$ m (Example 6; claim 1). However, Herrmann et al. do not teach or fairly suggest a process for olefin polymerization comprising the contact of polyamide support with the aluminum and then with the metallocene catalyst.

In light of the above discussion, it is evident as to why the present claims are patentable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
